

## REPAIRING A HOLE IN THE COLLECTOR

You will require a repair kit which includes: collector, pressure sleeves, joining barbs and grommets.

### INSTRUCTIONS

**STEP 1:** Squeeze the collector upward to expose the hole in the collector.

**STEP 2:** Cut the webbing between the tubes on either side of the hole.

**STEP 3:** Expose approximately 5cm of collector around the hole.

**STEP 4:** Cut the collector on either side of the hole to remove it.

## INSTRUCTIONS

**STEP 5:** Place a pressure sleeve on either side of the collector.

**STEP 6:** Push a joining barb onto one of the sides. Using a lubricant will make this easier.

**STEP 7:** Push the other side of the collector over the joining barb to connect the two sides.
